

## PRESS RELEASE

---

Wiesbaden, November 22<sup>nd</sup>, 2010

### **Tackling the future in real time with P&I**

**Attero, the Dutch waste disposal company and generator of renewable energy, is banking on the high-performance, flexible real-time communication of P&I TIME Online in the area of time recording and access control. The web-based all-inclusive solution for time management is operated as a stand-alone application at Attero.**

Just over 150 employees use the time management and access control system in the course of normal operations at Attero Afval Energie Centrale Moerdijk. However, in the summer months in particular it has to register and provide access to up to 2,000 additional external employees. On peak days, for example, there are more than 800 external employees on the company's premises because of repair work.

The large number of individuals that are recorded already constitutes a special challenge for time management, the access system and visitor administration. That is why Attero is utilising the new P&I TIME ONLINE development. All changes become active in the system immediately with the aid of this real-time communication solution. New ID media can be used right away after they have been activated. New employees are given access at once and changes to access profiles become active on the spot.

Visitor administration is also completely integrated into the access solution. This means that visitors have to register at the terminals and book their entry. They are then allocated to the respective host, visitor ID's are issued and access authorisations for certain areas are defined. Articles on loan, for example a helmet, are also registered here.

The importance of digital access control via P&I TIME ONLINE was demonstrated during a large-scale fire protection exercise. For this purpose it used to be necessary to print out an attendance sheet, and every employee and visitor had to be manually checked off the list when he or she left the premises. But now P&I TIME ensures the grounds can be cleared faster. "With P&I TIME we can see exactly who is still on the grounds. That is extremely important in the case of an alarm," emphasises Corne van der Hoeven, Service Manager at Attero in Moerdijk.

In addition, Attero has also introduced the web-based gatehouse solution of TIME ONLINE. It operates simultaneously on several PCs and - besides the entry barrier - it also visualises alarm reports, for example if terminals break down.

The access solution of P&I is currently being used exclusively at Attero's place of operations in Moerdijk. However, the Dutch waste processing company plans to use P&I TIME throughout the company in the future.

caption: P&I TIME not only records internal staff centrally, but also external employees and visitors. It provides them access to the company's premises via terminals, and working times are recorded at the same time. Analyses of attendance and times can be performed conveniently at any time at the touch of a button.

## **About Attero**

*Attero has been demonstrating increasingly that it is an innovative force in the production of recycling materials and generation of renewable energy from waste. The company's roots lie in the area of large-scale processing of domestic, organic and mineral waste materials. The company employs a workforce of 650 people at twelve locations. Attero processes the waste from almost 40 percent of all Dutch households, which means roughly 2.5 million tons a year. Its innovative solutions for fermentation of organic waste and plastics for the production of energy are exemplary. Thus, Attero produces electricity for about 350,000 households from renewable energies, and at the same time it is the largest producer of "green gas" in the Netherlands. Furthermore, the waste disposal company also supplies consumables (biological fuels) to power plants.*
